

SoyBond™ offers the best of both worlds

SoyBond is the designation for Smith & Fong products made with soy adhesives.

The proprietary manufacturing process of Soybond exhibits excellent mechanical properties that meet or exceed current standards in the industry.

Additionally, the workability and bio-based nature of the SoyBond panel or flooring product make it both easy to work with and easy to live with.

Smith & Fong products that are manufactured using the SoyBond process will have this logo:

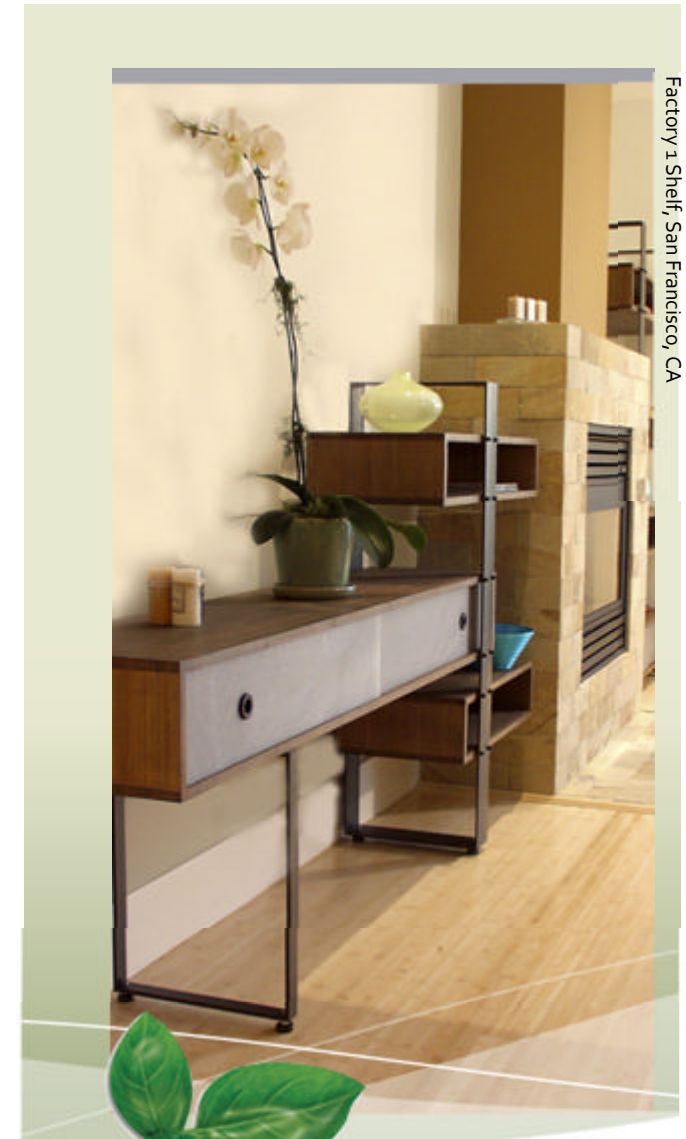

A healthier environment for all of us

SoyBond manufactured products are California Section 01350 tested for indoor air quality. California Section 01350 tests for more than 35 Volatile Organic Compounds (VOCs) including formaldehyde. SoyBond products not only pass the test, they surpass the competition in emissions standards.

Why BambooPure® SoyBond™ Panels and Flooring Make a Difference

Innovations in Bamboo

Since 1989, Smith & Fong Co. has been an innovator and leader in the development of bamboo as an alternative building resource.

Smith & Fong bamboo has been well established as a sustainable rapidly renewable and low impact forest product.

What is Soybond™?

SoyBond takes complications out of traditional manufacturing and uses a formaldehyde free adhesive that's more natural.

The end result is naturally formaldehyde free bamboo flooring and plywood and yet another innovation for Smith & Fong.

Responsibly harvested Bamboo

Smith & Fong's bamboo products are all made from rapidly renewable moso bamboo. This fast growing species needs no pesticides or fertilizers in its natural environment and is FSC® 100% certified bamboo.

BambooPure® bamboo products – flooring, plywood, veneers and panelling are now manufactured with soy. With FSC® certification to back them up, our bamboo products are amongst the greenest choices available.

Smith & Fong Bamboo is not only exceptionally well constructed and ethically sourced, its SoyBond manufactured plywood and flooring are the best choice for indoor air quality.

As of Summer 2011, the full line of BambooPure (no urea-formaldehyde) bamboo flooring and bamboo plywood, as well as Bamboo MultiSport sports flooring is manufactured SoyBond.
